International Student and Scholar Management

Attract, recruit, and assist international students and scholars more effectively

Attracting and retaining international students and scholars is a top priority for institutions that take pride in assembling diverse constituents. With Ellucian International Student and Scholar Management, your international office can:

- Work more effectively to attract and retain international students and scholars

- Increase productivity and service across all areas

- Minimize paper processes for a greener footprint while enhancing overall efficiencies

- Address regulatory requirements and updates

We understand that providing superior service is paramount—no matter where in the world your constituents reside. Ellucian International Student and Scholar Management has a fully integrated self-service module to ease international scholar credentialing, file updates, paperwork submissions, and other administrative tasks for academic department staff, advisors, and students. For institutions with greater than a hundred international students, Ellucian International Student and Scholar Management will help you automate your daily work processes.

"

"Ellucian International Student and Scholar Management helps us keep better track of what is happening with our international enrollment and programs. We can see how many students transferred and why; how many didn't complete their programs and why."

KIMBERLY BRUMBAUGH
Director, Visa Information and Support/SEVIS Management, Wright State University

Improve your international student and scholar recruitment, enrollment, and records management

Personalize correspondence for stronger relationships

Automated scheduled emails allow advisors to query specific constituents. For example, in the event of a natural disaster, advisors can filter all of their students and scholars from that country and send them an email to ensure they are accounted for and will be re-enrolling for the following semester.

Improve communication with students and scholars

Automatic email alerts facilitate the efficient turnaround of documents. Advisors simply program the system to send students 240-, 120-, 90-, 60- or 30-day reminders from the International Student and Scholar Office (ISSO) regarding document expiration dates and to schedule an appointment with their advisor.

Manage student changes in one historical database

Advisors can make all visa and general student and scholar changes in one central repository quickly and easily without having to toggle between systems to extract the data they need.

Centralize case management tracking

Our Record Navigator module compiles important student, scholar, and employee records and forms in one database. This information includes visa profiles, work authorizations, immigration and visa history, and Department of Homeland Security (DHS), Student and Exchange Visitor Information System (SEVIS) history, as well as a task and appointment manager for easy access to current data.

Enhance reporting capabilities

Because the data is maintained in one central repository, advisors can run industry-standard reports on all fields in the system. The Ellucian International Student and Scholar Management system features a series of Open Doors reports that provide advanced reporting capabilities for academic level, country of citizenship, enrollment and immigrations status, and more.

Meet complex regulatory requirements

Rather than users having to enter student and scholar information in a second system, Ellucian International Student and Scholar Management copies information from SEVIS reportable student/scholar records and uploads it to the SEVIS system in batches. The system also automatically includes format changes in how existing transactions are exchanged with the DHS. Additionally, our immigration forms mirror those of the United States Citizenship and Immigration Services (USCIS) to boost compliance and accuracy by eliminating manual entry.

Maintain regulatory updates

Ellucian International Student and Scholar Management provides automatic regulatory updates and enhancements as part of ongoing product maintenance agreements.
